

	Foyle Food Group Biodiversity Policy		
	Issue No. 1	Issue Date	04/08/2022
	Issued & Approved By:	Malachy McAteer (Operational Director)	

This policy outlines the commitment of Foyle Food Group to help protect nature and reverse the degradation of ecosystems. We recognise that biodiversity loss is a key challenge of our time. We are conscious of our responsibilities to embed sustainable practices in every area of our operations and support the protection of biodiversity. Our Sustainability Strategy is aligned with the UN 17 Sustainable Development Goals and as a business will focus on solutions and actions to tackle biodiversity loss.

We acknowledge that our operations use ecosystem services and natural resources resulting from biodiversity in various forms, it is a crucial part of safeguarding our water resources and the land on which we rely on, therefore, we want to make investments which will boost resilience in the natural environment to challenge the climate crisis.

By committing to enhance biodiversity throughout our sites where possible, adapting regenerative agriculture practices on our farms, sharing these actions with our stakeholders, this will enable ecosystems to flourish, allowing people, crops, livestock, and wildlife to prosper.
